DETAILED ACTION

Allowable Subject Matter

Claims 1-2 and 6-15 are allowed.

The closest prior art references, Green (US 6,830,597 B1) and Hozumi et al (US 3,883,616), do not disclose or suggest the claimed invention.

Regarding claim 1, Green discloses an ablative thermolysis reactor comprising: (i) a reaction vessel (3), (ii) an inlet into the reaction vessel for receiving feedstock (see figure 1), (iii) an outlet (50) from the reaction vessel for discharging thermolysis product, (iv) within the reaction vessel, an ablative surface (3) defining the periphery of a cylinder, (v) heating means (6) arranged to heat said ablative surface to an elevated temperature, and (vi) at least one rotatable surface (5), the, or each, rotatable surface having an axis of rotation coincident with the longitudinal axis of said cylinder, wherein the rotatable surface is positioned relative to the ablative surface such that feedstock is mechanically pressed between a part of the rotatable surface and said ablative surface and moved along the ablative surface by the rotatable surface, whereby to thermolyze said feedstock (see column 4, line 41 through column 6, line 41 and figure 1).

Hozumi et al discloses a rotatable surface is mounted inwardly of the ablative surface but arranged to press feedstock toward the center of the vessel (see claim 6).

The prior art references do not disclose or suggest an ablative thermolysis reactor wherein the reaction vessel is bounded by an outer peripheral wall with the ablative surface being defined by an inwardly facing surface of said outer wall, and the,

or each, rotatable surface is mounted inwardly of the ablative surface and arranged to press feedstock away from the axis of rotation.

Regarding claim 2, Green discloses an ablative thermolysis reactor comprising: (i) a reaction vessel (3), (ii) an inlet into the reaction vessel for receiving feedstock (see figure 1), (iii) an outlet (50) from the reaction vessel for discharging thermolysis product, (iv) within the reaction vessel, an ablative surface (3) defining the periphery of a cylinder, (v) heating means (6) arranged to heat said ablative surface to an elevated temperature, and (vi) at least one rotatable surface (5), the, or each, rotatable surface having an axis of rotation coincident with the longitudinal axis of said cylinder, wherein the rotatable surface is positioned relative to the ablative surface such that feedstock is mechanically pressed between a part of the rotatable surface and said ablative surface and moved along the ablative surface by the rotatable surface, whereby to thermolyze said feedstock, and, wherein the reaction vessel is bounded by an inner wall with the ablative surface being defined by an outwardly facing surface of said inner wall (see column 4, line 41 through column 6, line 41 and figure 1).

Hozumi et al discloses a rotatable surface is mounted inwardly of the ablative surface and arranged to press feedstock toward the axis of rotation (see claim 6).

The prior art references do not disclose or suggest an ablative thermolysis reactor wherein the, or each, rotatable surface is mounted inwardly of the ablative surface and arranged to press feedstock toward the axis of rotation.

Claims 6-15 depend on claim 1.
